

TravelNow

Victoria, Camilo, Taylor, Phil, Caroline

TravelNow

What it is: A travel application that allows you to plan your dream trip! Search your accommodations by either country or city and get hotel suggestions. Then, take your travel plans a step further by looking for things to do and places to eat nearby. See a place you like? Be sure to save it to your favorites to look back on later!

Why is this application valuable? Everyone is looking for a way to virtually escape in the middle of this pandemic. Since leisure travel is restricted right now, we need a place to fantasize about the trips we will take when the world is finally COVID free!

Roles

Victoria: Home Page - search bar/results, About Page, deployment

Camilo: Auth0 (login/logout features), Profile Page, APIs

Taylor: APIs, Favorites page & database, new package

Caroline: Routes, new package

Phil: Nav Bar, UI/UX

Frameworks

- ❑ React - client side: component based (search bar, pages, navbar)
- ❑ Express
- ❑ MongoDB
- ❑ Auth0
- ❑ React-Spinner (new)
- ❑ PowerPlug (new)

Future Add-Ons

In the future, we would like to add these features to our application:

- ❑ User based favorites page
- ❑ Ability to create folders based on location in favorites page
- ❑ Add links to hotels for booking (this wasn't supplied by the API)
- ❑ Add routing to make certain pages available only after logging in
